

MFS110 L1 Registered Device Service

Android Setup Guide

Contents

1. Downloading and Installing the App
2. Opening the App and Granting Permissions
3. Connecting the Device
4. Registering the Device
5. Activating on the Management Server

1. Downloading and Installing the App

The MFS110 L1 RDService application is available on the Google Play Store. Search for "**MFS110 L1 RDService**" and install it on your Android device.

You may also access the app download and further resources through our support portal:

- <https://www.rdservice.online/mantra>

App Name	MFS110 L1 RDService
Developer	Mantra Softech India Pvt Ltd
Platform	Android 7.0 and above
Supported By	RD Service Online

2. Opening the App and Granting Permissions

Once installed, open the MFS110 RDService app.

Permissions: On Android 12.0 and above, you must manually grant all runtime permissions when prompted. On earlier versions, permissions are granted automatically.

The app dashboard shows three status indicators:

- Internet connectivity status
- Management server reachability
- Device connection status

■ An active internet connection is required for the RD Service to function.

3. Connecting the Device

Connect the MFS110 fingerprint scanner to your Android handset via USB. A permission dialog will appear asking "**Allow MFS110 RDService to access MFS110?**" — tap **OK** to grant access.

Once connected successfully, the **Device connected** status indicator will turn green.

4. Registering the Device

After connecting, the app will automatically validate the device against the management server. Once validated, you will see the message "**Device is ready to use.**" All three status indicators will be green at this point.

5. Activating on the Management Server

To activate your device for pre-production or production use on the management server, you need to provide your device's serial number. Please contact RD Service Online support for assistance:
